

Dr. Habibah Surani, MMBS, Medical Aesthetician

Dr. Surani is a Malaysian trained physician, well known for her charitable work in support of the Malaysian Cancer Society. She brings 20 years of medical experience to her non-invasive cosmetic procedures and specializes in anti-aging and medical aesthetic treatments such as laser skin rejuvenation, laser skin tightening & laser hair removal. The Surani Clinic is equipped with the latest and best technologies and all procedures and consultations are done by Dr. Surani herself.

START THE NEW YEAR OFF WITH 3D REJUVENATION!

THE SURANI CLINIC

Middle and old age aren't what they used to be, thank goodness. With many baby boomers just hitting their 50's, there is no reason that the way they look on the outside can't reflect the vitality they feel on the inside.

This means addressing fine lines and wrinkles, the most common sign of aging skin. Some people are genetically predisposed to wrinkling. Sun exposure and smoking are the biggest environmental culprits, though stress can also be a factor.

One of the hottest procedures that can be done right now, is the 3D Laser Rejuvenation treatment. Skin issues ranging from sagging skin, pigmentation, fine lines and wrinkles, uneven skin texture, enlarged pores or broken capillaries can be addressed with the 3D approach.

Starting with a digital skin analysis, the skin issues and personalization of treatments for one's needs is discussed. After thoroughly cleansing the skin, Vibraderm Microdermabrasion is performed to exfoliate dead skin cells. This enables the skin products to penetrate deeper and also gives optimal results for the laser treatments. Sagging skin is addressed first with the award winning Cutera's Titan Laser. This is able to give you a more defined cheekbone and a sleeker jaw line by tightening the

loose skin on the lower face and neck and the nasolabial folds.

Next laser genesis is performed to address the next level of dermis which takes care of textural problems, fine line and wrinkles, enlarged pores and facial redness. The top most layer is treated with limelight photo facials. This addresses issues like age spots and skin pigmentation and also facial redness.

Most of the clients have a 'wow' effect immediately after each treatment and get more results in 2 to 3 months. All procedures are non-surgical with no downtime, needles, and are practically safe.

Start now for a healthy beautiful skin. Now we know its better to begin treatments in your 30's and 40's and if you maintain it, when you hit 60 your skin will be much different then that of your contemporaries. It will be tighter, more toned and more lustrous.
